

Solve each problem.

1) $\frac{2}{4} - \frac{1}{2} =$

2) $\frac{5}{6} + \frac{5}{8} =$

3) $\frac{4}{8} - \frac{2}{5} =$

4) $\frac{2}{3} + \frac{4}{10} =$

5) $\frac{5}{7} - \frac{5}{8} =$

6) $\frac{2}{3} + \frac{3}{9} =$

7) $\frac{7}{8} - \frac{2}{7} =$

8) $\frac{2}{3} + \frac{1}{4} =$

9) $\frac{8}{9} - \frac{3}{6} =$

10) $\frac{4}{6} + \frac{4}{8} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{2}{4} - \frac{1}{2} = \frac{4}{8} - \frac{4}{8} = \frac{0}{8}$

2) $\frac{5}{6} + \frac{5}{8} = \frac{40}{48} + \frac{30}{48} = \frac{70}{48}$

3) $\frac{4}{8} - \frac{2}{5} = \frac{20}{40} - \frac{16}{40} = \frac{4}{40}$

4) $\frac{2}{3} + \frac{4}{10} = \frac{20}{30} + \frac{12}{30} = \frac{32}{30}$

5) $\frac{5}{7} - \frac{5}{8} = \frac{40}{56} - \frac{35}{56} = \frac{5}{56}$

6) $\frac{2}{3} + \frac{3}{9} = \frac{18}{27} + \frac{9}{27} = \frac{27}{27}$

7) $\frac{7}{8} - \frac{2}{7} = \frac{49}{56} - \frac{16}{56} = \frac{33}{56}$

8) $\frac{2}{3} + \frac{1}{4} = \frac{8}{12} + \frac{3}{12} = \frac{11}{12}$

9) $\frac{8}{9} - \frac{3}{6} = \frac{48}{54} - \frac{27}{54} = \frac{21}{54}$

10) $\frac{4}{6} + \frac{4}{8} = \frac{32}{48} + \frac{24}{48} = \frac{56}{48}$

Answers

1. $\frac{0}{8}$
2. $\frac{70}{48}$
3. $\frac{4}{40}$
4. $\frac{32}{30}$
5. $\frac{5}{56}$
6. $\frac{27}{27}$
7. $\frac{33}{56}$
8. $\frac{11}{12}$
9. $\frac{21}{54}$
10. $\frac{56}{48}$
