Adding Fractions

$$1) \quad \frac{2}{4} + \frac{14}{16} = \frac{8}{16} + \frac{14}{16} = \frac{22}{16} = \frac{11}{8} = 1\frac{3}{8}$$

$$2) \quad \frac{2}{27} + \frac{3}{9} = \frac{2}{27} + \frac{9}{27} = \frac{11}{27}$$

$$3) \quad \frac{2}{14} + \frac{10}{28} = \frac{4}{28} + \frac{10}{28} = \frac{14}{28} = \frac{1}{2}$$

$$4) \quad \frac{5}{40} + \frac{3}{10} = \frac{5}{40} + \frac{12}{40} = \frac{17}{40}$$

$$5) \quad \frac{11}{13} + \frac{5}{26} = \frac{22}{26} + \frac{5}{26} = \frac{27}{26} = 1\frac{1}{26}$$

$$6) \quad \frac{5}{11} + \frac{1}{22} = \frac{10}{22} + \frac{1}{22} = \frac{11}{22} = \frac{1}{2}$$

$$7) \quad \frac{7}{11} + \frac{5}{22} = \frac{14}{22} + \frac{5}{22} = \frac{19}{22}$$

$$8) \quad \frac{7}{16} + \frac{6}{8} = \frac{7}{16} + \frac{12}{16} = \frac{19}{16} = 1\frac{3}{16}$$

$$9) \quad \frac{14}{26} + \frac{9}{13} = \frac{14}{26} + \frac{18}{26} = \frac{32}{26} = \frac{16}{13} = 1\frac{3}{13}$$

$$10) \quad \frac{1}{3} + \frac{2}{4} = \frac{4}{12} + \frac{6}{12} = \frac{10}{12} = \frac{5}{6}$$
