### Subtracting Fractions

$$1) \quad \frac{4}{5} - \frac{2}{6} = \frac{24}{30} - \frac{10}{30} = \frac{14}{30} = \frac{7}{15}$$

$$2) \quad \frac{2}{4} - \frac{1}{5} = \frac{10}{20} - \frac{4}{20} = \frac{6}{20} = \frac{3}{10}$$

$$3) \quad \frac{3}{6} - \frac{10}{30} = \frac{15}{30} - \frac{10}{30} = \frac{5}{30} = \frac{1}{6}$$

$$4) \quad \frac{7}{8} - \frac{2}{4} = \frac{7}{8} - \frac{4}{8} = \frac{3}{8}$$

$$5) \quad \frac{4}{6} - \frac{1}{12} = \frac{8}{12} - \frac{1}{12} = \frac{7}{12}$$

$$6) \quad \frac{1}{6} - \frac{2}{18} = \frac{3}{18} - \frac{2}{18} = \frac{1}{18}$$

$$7) \quad \frac{5}{16} - \frac{2}{8} = \frac{5}{16} - \frac{4}{16} = \frac{1}{16}$$

$$8) \quad \frac{3}{4} - \frac{2}{14} = \frac{21}{28} - \frac{4}{28} = \frac{17}{28}$$

$$9) \quad \frac{5}{8} - \frac{6}{16} = \frac{10}{16} - \frac{6}{16} = \frac{4}{16} = \frac{1}{4}$$

$$10) \quad \frac{5}{7} - \frac{8}{14} = \frac{10}{14} - \frac{8}{14} = \frac{2}{14} = \frac{1}{7}$$
