Subtracting Fractions

$$1) \quad \frac{7}{10} - \frac{5}{12} = \frac{42}{60} - \frac{25}{60} = \frac{17}{60}$$

$$2) \quad \frac{10}{13} - \frac{7}{26} = \frac{20}{26} - \frac{7}{26} = \frac{13}{26} = \frac{1}{2}$$

$$3) \quad \frac{3}{4} - \frac{5}{12} = \frac{9}{12} - \frac{5}{12} = \frac{4}{12} = \frac{1}{3}$$

$$4) \quad \frac{1}{3} - \frac{14}{42} = \frac{14}{42} - \frac{14}{42} = 0$$

$$5) \quad \frac{11}{16} - \frac{3}{12} = \frac{33}{48} - \frac{12}{48} = \frac{21}{48} = \frac{7}{16}$$

$$6) \quad \frac{12}{16} - \frac{2}{4} = \frac{12}{16} - \frac{8}{16} = \frac{4}{16} = \frac{1}{4}$$

$$7) \quad \frac{12}{29} - \frac{12}{58} = \frac{24}{58} - \frac{12}{58} = \frac{12}{58} = \frac{6}{29}$$

$$8) \quad \frac{4}{5} - \frac{7}{40} = \frac{32}{40} - \frac{7}{40} = \frac{25}{40} = \frac{5}{8}$$

$$9) \quad \frac{16}{27} - \frac{4}{9} = \frac{16}{27} - \frac{12}{27} = \frac{4}{27}$$

$$10) \quad \frac{14}{25} - \frac{1}{5} = \frac{14}{25} - \frac{5}{25} = \frac{9}{25}$$
